 - NOVELTY An isolated polynucleotide molecule containing a nucleotide sequence encoding HtrA, PonA, HypC, LysS, YefW, ABC1 or Omp100 protein of Lawsonia intracellularis, or it's fragment or homolog, is new.
 - DETAILED DESCRIPTION INDEPENDENT CLAIMS are also included for the following:
 - (1) polynucleotide molecule containing more than 20 nucleotides having promotor activity and being found in nucleotides 2691-2890 of a 5445 nucleotide sequence, fully defined in the specification, or its complement;
 - (2) a recombinant vector containing the polynucleotide of (1);
 - (3) a transformed host cell transformed containing the novel vector;
 - (4) a polypeptide produced by the cell of (3);
 - (5) a gene construct containing a polynucleotide molecule which can be used for changing Lawsonia gene;
 - (6) a transformed cell containing the construct of (5);
 - (7) an isolated polypeptide produced by the cell of (6);
 - (8) an attenuated live vaccine containing the transformed cell of (6);
 - (9) a killed vaccine containing the cell of (6) in dead form; and
 - (10) an immunogenic composition containing an immunologically effective amount of the polypeptide of (3), and a carrier.
 - ACTIVITY Antibacterial.
 - No biological data is given.
 - MECHANISM OF ACTION Vaccine.
 - USE The composition is useful for the prevention of Lawsonia intracellularis infection. (Dwg.0/9)
